CENTRAL MONITORING · DATA CHECK

Why September 2026 Shipped CBM Looks High

SAWO INC. · Prepared 22 October 2026 · Finished goods only · Data read from Odoo (read-only) and from the "WEEK 43 2026 SHIPMENT SCHEDULE" Excel

In short: the dashboard shows **about 781 m³** shipped in September 2026, while your Excel shows **about 414 m³**. The calculation is correct; the difference comes from **when deliveries were validated in Odoo**.

About **325 m³** that your Excel lists as shipped between January and August was only validated in Odoo in September. The dashboard can only use the date Odoo has, so these shipments land in September instead of the month they really left.

1. How the dashboard counts Shipped CBM

- **What:** completed outgoing deliveries in Odoo, finished goods only (heaters, sauna rooms, accessories and other finished goods).
- **CBM:** quantity delivered × the product's volume in Odoo (m³).
- **Month:** the date the delivery was **validated (completed) in Odoo**, in Philippine time.

Odoo has **no "actual loading date" field** on deliveries or sales orders. We searched for loading, departure, container and ETD dates and found none. Your Excel's date comes from your own "SO Monitoring" sheet (STATUS = SHIPPED, ACTUAL LOADING date), which is not in Odoo.

2. September 2026 compared with your Excel

Every delivery that Odoo shows as completed in September was matched by SO number with the week your Excel lists that SO as shipped:

According to your Excel, the SO was shipped…	CBM in Odoo's September	Deliveries
in an earlier week (January – August)	**325 m³**	**88**
in a September week	194 m³	37
not listed in the Excel	262 m³	29
Total September in the dashboard	**781 m³**	**154**

Week 40 (28 Sep – 4 Oct) is counted as September. An SO shipped in parts can appear in several Excel weeks; it is counted as "earlier" only when every week it appears in is before September.

Largest examples

Delivery	SO	CBM	Excel: shipped	Odoo: validated
PL1/OUT/01053	S04781	83.2 m³	week of 12 Jan 2026	24 Sep 2026
PL1/OUT/02355	S06554	65.0 m³	week of 8 Jun 2026	30 Sep 2026
PL2/OUT/00253	S06188	50.5 m³	week of 23 Mar 2026	18 Sep 2026
PL3/OUT/00861	S07507	23.9 m³	week of 22 Jun 2026	12 Sep 2026
PL1/OUT/01607	S05534	23.2 m³	week of 23 Mar 2026	22 Sep 2026
PL1/OUT/03727	S06554	13.3 m³	week of 8 Jun 2026	30 Sep 2026

Two days alone add about 325 m^3 to September in Odoo: **30 September (168 m^3)** and **24 September (157 m^3)**, which looks like a catch-up of older paperwork. Product volumes look correct (for example a wooden door is about 0.22 m^3 and a sauna room 2.3 – 3.1 m^3).

3. The same effect in other months

Because older shipments were validated late, earlier months are **too low** in the dashboard and September is **too high**:

Month (2026)	Your Excel (actual loading)	Dashboard (Odoo validation)
January	243 m^3	27 m^3
February	273 m^3	39 m^3
March	520 m^3	17 m^3
April	347 m^3	141 m^3
May	404 m^3	106 m^3
June	282 m^3	110 m^3
July	315 m^3	188 m^3
August	188 m^3	182 m^3
September	**414 m^3**	**781 m^3**
October (so far)	272 m^3 (to 18 Oct)	273 m^3 (to 22 Oct)

The Excel figures are its weekly totals split evenly over the days of each week, so they are approximate per month. The Excel starts with the week of 5 January 2026.

From January to September, Odoo shows about **1,590 m^3** against about **2,985 m^3** in your Excel. Besides late validation, part of this gap may come from deliveries not validated in Odoo yet, products without a volume in Odoo, or the Excel measuring CBM in a different way. This is worth checking with the team.

4. What can fix it

1. **Validate deliveries in Odoo on the day the goods are loaded.** From then on the dashboard matches the real shipping month automatically. This is a change in the warehouse routine, not in the dashboard.
2. **Past months:** the dates already in Odoo stay as they are unless your Odoo administrator corrects them. The dashboard only reads Odoo and never changes it.
3. **Optional:** your Odoo administrator can add a **"Loading date"** field on deliveries. The dashboard can then use that date instead of the validation date.

Questions for you

1. Did deliveries PL1/OUT/01053, PL1/OUT/02355, PL2/OUT/00253 and PL1/OUT/01607 physically leave earlier than September, as your Excel shows?
2. Can the warehouse team validate deliveries in Odoo on the loading day from now on?
3. Would you like a "Loading date" field added in Odoo (by your Odoo administrator) for the dashboard to use?
4. Should transfers between your own plants (for example PL2/OUT/00253, 50.5 m^3, sent to inter-warehouse transit) count as shipped?

Sources: Odoo (completed outgoing deliveries, product category and volume, read-only) and the Excel sheet "Wkly Shipped CBM & LT" in "WEEK 43 2026 SHIPMENT SCHEDULE.xlsx". Figures are rounded. Odoo data as of 22 October 2026. No data in Odoo was changed for this check.
